DETAILED ACTION

Status of Claims

1. This action is in reply to the response filed on 24 July 2006.
2. Claims 21, 40, 47, and 49 have been amended.
3. Claims 26, 46, and 48 have been canceled.
4. Claims 21-23, 25, 27-45, 47, and 49-57 are currently pending and have been examined.

EXAMINER'S AMENDMENT

5. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.
6. Authorization for this examiner's amendment was given in a telephone interview with PHILIP ASKENAZY on 21 September 2006.

The application has been amended as follows:

Claim 27 (previously presented): The method of claim ~~[[26]]~~ 21 comprising:

displaying the object to the viewer for a first short predetermined time;
collecting first viewer reactions to the first short display;
displaying the object to the viewer for a second longer predetermined time; and
collecting second viewer reactions to the second longer display; and
displaying to the decision maker a plurality of images, wherein each image is derived from each of the collected viewer reactions.

Allowable Subject Matter

7. Claims 21-23, 25, 27-45, 47, and 49-57 are allowed. See Reasons for Allowance under separate heading.

Reasons For Allowance

8. The following is an Examiner's statement of reasons for allowance:

None of the art of record, taken individually or combination, disclose at least the method step or system components of:

- *displaying an undivided display object on a display screen for a predetermined time of between approximately ¼ second and 4 seconds to at least one viewer for the purposes of collecting viewer reactions to the display object;*
- *collecting cognitive viewer reactions to at least one element of the display object after the at least one viewer has viewed the undivided display object;*
- *dividing the display object into a plurality of spatial regions, such spatial regions being mapped to the display object, after the step of displaying the display object to at least one viewer;*
- *correlating the previously collected viewer reactions with the spatial based on the viewer reactions corresponding to each spatial region.*
- *displaying to the decision maker, and not the at least one viewer, the display object with at least one characteristic regions of the display object;*
- *image processing, using a computer or other processor, the previously collected viewer reactions corresponding to each spatial region;*

More specifically, the prior art of record fails to disclose displaying an image for a specific range of time, overlaying a grid onto the image, and providing the viewer reactions to the image

to a decision maker for interpretation. Independent claims 21 and 40 are distinguished over the closest prior art of Bell (US 5,424,945 A), which teaches a document (display object) is analyzed and given a visual aspect in view of certain criteria and a grid is electronically placed over the aspect (see at least column 7, lines 3-10), the grid is divided into a plurality of spatial regions being a matrix of cells as shown in at least Figure 3. As recited in independent claims 21 and 40, it is clear that the Applicant's invention is distinguished over the Bell invention in at least the method step and/or system component of presenting the image to the viewer without overlaying the grid for time between approximately $\frac{1}{4}$ second and 4 seconds, collecting the reactions, and providing the image with the imposed grid to a decision make who interprets the data.
